

ALLESTPAC OÜ QUALITY- ENVIRONMENTAL AND FOOD SAFETY POLICY

Our main area of activity is the production, development and sale of non-reusable PET plastic products.

We consider important:

QUALITY

- Which we guarantee by certifying that raw materials and products correspond to the requirements of valid norms.

CUSTOMER ORIENTED APPROACH AND SECURITY OF PROVISION

- We create a product suitable for the customer and deliver it according to their wishes.
- We order our raw materials and delivery from reliable and long-term cooperation partners that guarantee our security of provision.

PROFESSIONALISM

- We are competent in designing products according to the customer's wishes. We own a 33% share in a tool manufacturing company (Ljungby Verktyg AB), which guarantees that the production of our products is given priority.
- We provide our employees with primary training and additional training both in Estonia and abroad.

ENVIRONMENTAL SAFETY

- Our production does not create wastes – everything can be reutilised.
- Our employees are obligated to avoid contamination and everyone has to use natural resources sustainably.
- If possible, use technological solutions that decrease environmental contamination.
- Our activities are based on and follow legislative and other recommendations.

FOOD SAFETY

- We follow good manufacturing practice requirements. We use in the production of packaging materials and objects that are safe for health.

CONTINUOUS IMPROVEMENT

- The management of AllEstPac OÜ has set goals for the realisation of the quality, food safety and environmental policy and compiled a plan for achieving them. Following the goals and adhering to the plan help continuously improve the management system.

The quality and environmental policy of AllEstPac OÜ was approved by the management on 28.11.2014.

ENVIRONMENTAL ASPECTS OF ALLESTPAC OÜ

AllEstPac OÜ has determined the important environmental aspects related to its activities – the aspects that influence the surrounding environment. We pay most attention to:

THE USE OF RAW MATERIAL

- We use raw material as optimally as possible and reprocess wastes.

PACKAGING

- Our packaging is as environmentally sustainable as possible.

CARRIAGE OF GOODS

- Our finished goods are transported by environmentally sustainable transportation companies.

EQUIPMENT AND PRODUCTION NOISE

- We maintain our equipment regularly.
- We make an effort to monitor production noise levels and keep them within allowed limits.

HANDLING WASTE

- We sort wastes and hand them over to according service providers.

DEVELOPMENT

- Environmental sustainability is at the heart of planning technology.

As a POSITIVE ENVIRONMENTAL ASPECT we would like to point out that AllEstPac OÜ reuses its production waste and defective products in the production cycle – our production creates no environmentally dangerous surplus.

This makes us an example to other production companies and enables us to improve environmental conditions.

We constantly improve our quality and environmental management system by setting goals and creating an activity plan to achieve these goals.

In order to decrease the environmental impact, we primarily strive to inform our cooperation partners and customers (who aid in our production or use our products, and are one party in causing the impact), but also our neighbours of these important aspects.
